These sensors are thermocouples and resistance thermometers for surface temperature measurement of objects.

C400•R400 Magnet sensors

Surface temperature measurement and monitoring of objects such as refrigerators and motors which a magnet can be absorbed.

R420 Pipe Surface Temperature Sensors

For measurement of every kinds of pipes
By mounting sensors at outlet and inlet of a pipe, heat loss can be measured by temperature difference.
Mounting of sensors is by a magic tape.

R060 Surface Temperature Sensors

Surface temperature measurement and monitoring of stationary objects such as every kind of materials, machines, and equipment.
Skin temperature measurement and monitoring of human bodies.
Temperature measurement of trees and leaves.

C015 Simple Compensation Type Surface Temperature Sensors

Surface temperature measurement of press rollers, rolling rollers, coating rollers, calendar rollers, and others.
Surface temperature measurement of moving belts, sheets, and others.
Non-contact surface temperature measurement of other moving objects.

C060 Sheet couples

Surface temperature measurement of stationary objects.
Surface temperature measurement of small objects.
Temperature distribution measurement of stationary objects.
Magnet Sensors (Thermocouple)
Model C400 - 01
This surface temperature sensor uses a 0.1 mm (thickness) K type ribbon thermocouple as a detecting element and is mounted by a built-in magnet to an object. Temperature of a place, where a magnet is absorbed, of refrigerators and motors can be measured.

■ General Specifications
Measuring range: 0 to 100°C
Class: JIS 2
Element: K (ribbon thermocouple)
Connecting lead wire: 2m of vinyl covered extension wire (maximum 60°C)
Response time: Room temp. 100°C iron plate above boiling steam about 2 seconds (time to reach to 90% of equilibrium)

External Dimensions
- Heat contact (K type ribbon tc)
- Sensor (Phenol resin)
- Lead fixture (Brass, Ni plated)
- Stick type magnet
- Vinyl covered extension wire: 2m

Unit: mm

Small Magnet Sensors (Thermocouple)
Model: C401 - K: K type thermocouple
T: T type thermocouple

This surface temperature sensor uses a 0.32 mm thermocouple as a detecting element and is mounted by a built-in small magnet (outer diameter: Ø10mm, thickness: 4.5mm) to an object. Temperature of a place, where a magnet is absorbed, of robots for research and experiment, machine tools, bearings, pipes, and furnace walls can be measured.

■ General Specifications
Measuring range: 0 to 100°C
Class: JIS 2
Element: K, T
Connecting lead wire: 2m of teflon covered thermo-couple
Response time: Room temp. 100°C nickel plated aluminum plate about 10 seconds

External Dimensions
- Teflon covered thermocouple (2m)
- Magnet

Unit: mm
Magnet Sensors (RTD)
Model: R400 - 1: JPt100, 3: Pt100
This surface temperature sensor uses a platinum resistance thermometer as a detecting element and is mounted by a built-in magnet to an object. Temperature of a place, where a magnet is absorbed, of refrigerators and motors can be measured.

General Specifications
Measuring range: 0 to 60°C
Class: JIS B
Element: Pt100, JPt100 3-wire type
Nominal current: 2mA
Connecting lead wire: 2m of vinyl covered copper lead wire
Response time: Room temp. 100°C iron plate above boiling steam about 97 seconds (time to reach to 90% of equilibrium)

Small magnet Sensors (RTD)
Model: R401 - 3
This surface temperature sensor uses a thin-film element as a detecting element and is mounted by a built-in small magnet (outer diameter: Ø10mm, thickness: 4.5mm) to an object.

General Specifications
Measuring range: 0 to 100°C
Class: JIS B
Element: Pt100 3-wire type
Nominal current: 2mA
Connecting lead wire: 2m of silicone covered copper lead wire
Response time: Room temp. 100°C nickel plated aluminum plate about 25 seconds

Pipe Surface Temperature Sensors (RTD)
Model: R420 - 1: JPt100, 3: Pt100
This surface temperature sensor for pipes uses a platinum resistance thermometer with heat collection plate. This sensor uses a magic tape and can be mounted to various sizes of pipe.

General Specifications
Measuring range: 0 to 60°C
Class: JIS B
Element: Pt100, JPt100 3-wire type
Nominal current: 2mA
Connecting lead wire: 2m of vinyl covered copper lead wire
Response time: Room temp. 60°C aluminum pipe surface (outer diameter: Ø60mm, wall thickness: 10mm) about 6 seconds

Note: The standard magic tape length (200mm) can be connected to pipes less than Ø50mm.
This sensor, having a platinum resistance thermometer as a detecting element, is intended for measurement of surface temperature of stationary objects, with a minimum heat disturbance. Five types for specific measuring conditions are available.

General purpose type (R060 - 1)
A platinum resistance thermometer element is encapsulated with silicone rubber molding in a thin brass casing for moisture-proof and shock resistance.

Flexible type (R060 - 2)
A platinum resistance thermometer element is encapsulated with silicone rubber molding as thin as 0.8mm, which is flexible enough to permit the element to be fitted to a curvature of 20mm radius at minimum.

Small type (R060 - 3)
Being very small, 8 x 12.5 x 1mm in width, length, and thickness, respectively, this sensor enables stable measurement over a range of -50°C to 150°C.

High temperature type (R060 - 4)
A platinum resistance thermometer wound on a ruby mica is housed in a brass casing, with the lead wire fixing material made of aluminum porcelain to permit stable measurement up to 500°C.

Small reinforced type (R060 - 8)
A platinum resistance thermometer element is mounted in a copper circle plate with better heat-conductivity and has excellent mechanical strength. The lead wires are fixed by resin for high temperature and are strong to disconnection, etc. This sensor with the Ø7mm outer diameter is suitable to high accurate measurement of small area.

C015 Series
Surface Temperature Sensor (Thermocouple)

This sensor is a non-contact type thermocouple for surface temperature measurement and has a built-in automatic compensation circuit for difference of close air temperature and true temperature. Its applications are temperature measurement of rollers, running belts, plastic sheets, etc.

**Features**
- Non-contact temperature measurement from room temperature to 250°C or to 500°C with a constant distance (1 to 2mm)
- Accurate temperature measurement by automatic compensation for variation of object temperature and environmental temperature
- Stable temperature measurement by a stabilizing filter
- No emissivity compensation for object material, surface, etc.
- A K type thermocouple is used for a detecting element.

This model is suitable for temperature measurement in case that measurement environment has relatively little disturbance and measuring distance is constant (1 to 2mm). It can be used for press rollers, rollers, heating rollers, running belts, sheets, etc. in various industries.

This model is with a reflector. It can be used in case that measurement environment has much disturbance and measuring distance is long as about 3mm.

This model is suitable for temperature measurement in case that measuring distance varies like as eccentric rollers, axis-variation belts, etc. Stable measurement is possible by teflon rollers that contact to objects up to ±5mm of measurement surface variation.
### Construction
This sensor is consisted of a sensor probe and a resistance box. The sensor probe consists of three sensing elements made up in coils and with a miller for effective heat receiving. A filter is inserted in front of the element for stabilization of output as well as for protection of the element. A trimmer resistor for compensation constant is built-in.

**General Specifications**
Measuring element: K type thermocouple
Element diameter: φ 0.1mm
Measuring range:
- General -- Room temp to 250°C
- High temp -- Room temp to 500°C
Ambient temperature:
- General -- up to 100°C
- High temp. -- up to 230°C
Measuring accuracy: Within ±5°C in measuring range of 200°C span
(When the compensation constant is given at halfway of the measuring range)
Measuring distance: 1 to 2mm (fixed)
Response time: About 6 seconds (time constant)
Output signal: E.M.F. of L type thermocouple
Output impedance: 15 to 22
Output stabilizing filter: 0.07mm thick amber mica
Lead wire:
- φ 7mm heat resistant vinyl cord
- or silicone rubber covered lead wire 5m (10m)

### Measuring Method
1. Measure temperature of an object by a contact type surface temperature sensor. For a running surface, stop it temporary and measure temperature
2. By adjusting a trimmer resistor in the resistance box by a minus driver, adjust an output of this sensor to the measured value by the contact type surface temperature sensor.
C600 Series
Sheet Couple (Thermocouple)

Model C060-K  
C060-T

This sensor is a thermocouple (Type K, Type T) in sheet form with the measuring junction covered with an insulating paper. The sensor is directly pasted to surface of objects to be measured.

- Quick response
  Being as thin as 0.07mm, the sensor is very quick in response.

<table>

<td>-----</td>
</tr>
</tbody>
</table>

- No thermal disturbance
  Being small in size and very low heat capacity, the sensor gives little thermal disturbance to a surface to be measured. This makes the sensor suitable for measuring temperature of small objects.

- Easy pasting or winding
  For measurement of relatively low temperature, the sensor can be conveniently pasted to objects. For measuring temperature of round surface such as pipes, the sensor can be wound around surface with a tape.

### General Specifications

- Measuring range: -200 to 300°C *1
- Class: JIS 2
- Element: K, T
- Lead wire: Extension wire for type K or T, or Ø3.2mm type K or T thermocouple wire
- Connection: Spot welding (or soldering for use at relatively low temperature)
  Sensors with a cord is available upon request.
- Mounting: Pasting or pressing
- Applications:
  - Surface temperature measurement and monitoring of stationary objects
  - Surface temperature measurement of small objects
  - Measurement of temperature distribution of stationary surface

*1 The insulating paper can be used up to 150°C.
